                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of Blumeria graminis f. sp. hordei, and leaves were harvested 20 and 24 hr post inoculation and snap frozen; uninoculated leaves were harvested 20 hr post-inoculation (Wei, Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Close), Phagemids swere plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing), Plasmid DNA perparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.genome.clemson.edu/projects/barley.                                                                                                                                                                                                   127
                                                                                                                                                                                                                                                                                                                                                                             reaction, the ends of the CDNA were made blunt with Klenow fragment and EcoRI/NotI adapters (Pharmacia) were ligated to each end. The cDNA was purified from unligated adapters by spun-column chromatography using sephacryl s-300 and size-fractionated on a 1% low melting point mini-gel. Size selected cDNAs (2 - 3 kb) were removed from the gel using agarase (New England Biolabs), phenol:choloroform extracted and precipitated using 0.3 M NaOAc (pH 7)/ethanol. A portion of each cDNA size-fraction (0.1 ug) was co-precipitated with 1 ug of lambdaZapii (StratageneEcoRI digested, dephosphorylated arms and then ligated in a volume of 4 ul overnight. Each ligation mix was packaged in vitro using Giqapack II gold packaging extract (Stratagene). We have determined that although first strand cDNAs begin 8-10 bp from the poly-A tail. The reason for the loss of the poly-A tail is most
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               22313tcn@ibm.cl.msu.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note-*Yector: pBluescript SK-; Site_1: EcoR1; Site_2: EcoR1; Using 5 ug of polyadenylated mRNA from 3 day-old Arabidopsis thaliana (Columbia) seedling hypocotyls as template and oligo d(t) as primer, first strand synthesis was catalyzed by Moloney murine leukemia virus reverse transcriptase (Pharmacia). Second-strand cDNA was made using the procedure of Gubler and Hoffman (1983) except that DNA ligase was omitted. After the second strand reaction, the solds of the column was made below the second strand reaction.
                                                                                                                                                                                                                likely due to lower than anticipated nucleotide levels during the Klenow repair of ragged ends before the addition of linkers (3'-5' exo instead of 5'-3' pol). When this library is used please reference the ABRC and: Kleber, J. et al. (1993) Cell 72:427-441."

                                                                                                                                                                                                                                                                                                                                                                    California, Riverside (Choi). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                spikes with awns trimmed were collected at 20 DAP (Fentol) Total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids in the TJ Close lab at the University of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="vector: psport] (Life Technologies); Site_1: Not I; Site_2: Sal I; This cDNA library was constructed from mRNA isolated from immature seed coats (200-300 mgs) of greenhouse grown plants. The library was prepared using the Life Technologies psuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly (dT) sequence with a Not I restriction site. Sal I linker adapters were ligated to the blunt-ended cDNA fragments were directionally cloned into the Not I-Sal I restriction site of the psport] vector. The Ligated cDNA fragments were directionally cloned into the Not I-Sal I restriction site of the psport] vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DHJOB host cells (Gibco BRL). This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna.*
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ωı
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         plants"
